

Senior Full-Stack Developer / Architect with 20+ years of experience designing and delivering scalable, production-grade systems across frontend, backend, and cloud infrastructure.

Over the last 5 years, I have owned end-to-end system architecture, leading the design of APIs, microservices, and distributed systems with a strong focus on scalability, performance, and reliability.

Experienced in defining system boundaries, making architectural trade-offs, and ensuring production stability through observability, fault tolerance, and CI/CD automation.

Strong hands-on expertise in React, Node.js, Laravel, and cloud-native architectures on Azure and AWS.

SYSTEM DESIGN & ARCHITECTURE

- Designed scalable system architectures using microservices and modular monolith approaches
- Defined API contracts and integration patterns (REST, async processing)
- Implemented asynchronous workflows using queues and background jobs (Redis, Azure Functions)
- Designed relational data models with flexible structures (JSON fields)
- Evaluated architectural trade-offs (performance vs maintainability, sync vs async)
- Built fault-tolerant systems using retry strategies and idempotent operations
- Implemented logging, monitoring, and performance optimization strategies in production
- Anticipated scalability challenges and designed systems to handle increasing workloads.

EXPERIENCE

Taller Technologies, USA — *Full-stack Developer*

AUGUST 2024 - SEP 2026

- Owned the end-to-end architecture and delivery of a production system across frontend, backend, and cloud infrastructure
- Designed scalable APIs and backend services ensuring performance, maintainability, and data integrity
- Implemented asynchronous processing using Azure WebJobs and Functions for background workflows.
- Optimized system performance using Redis caching and database tuning
- Designed and maintained CI/CD pipelines ensuring reliable deployments
- Monitored and improved system performance and reliability in production environments
- Designed and optimized relational databases (MySQL, PostgreSQL) with flexible data modeling using JSON fields.
- Improved system performance by ~30% through caching and database optimization
- Reduced processing time by implementing asynchronous background jobs.
- Designed event-driven and queue-based workflows to decouple services and improve scalability.
- Managed Azure cloud infrastructure (App Services, Storage, MySQL, Redis).
- Implemented retry logic and idempotent operations to ensure fault tolerance in distributed processes.
- Led technical decision-making and contributed to architecture discussions across the team.

Technologies: Laravel, Vue.js, PHP, JavaScript, MySQL, PostgreSQL, Redis, Azure (App Services, Storage, WebJobs, Functions), Docker, GitHub Actions, Tailwind CSS

Mosiah Azuaje

Senior Full-Stack Developer / Architect

Bogotá, Colombia (UTC-5)

CXP Crypto Platform, Colombia – Full-stack Developer (Collaborator)

SEPTEMBER 2025 - AUG 2026

- Contributing to the development of a crypto platform using Next.js (frontend) and Nest.js (backend).
- Designed and built scalable APIs and services following modular and microservices-oriented architecture.
- Implemented modern frontend patterns with React + TypeScript (Next.js App Router).
- Integrate AI-powered features using LangChain, including:
 - Text processing from external sources (PDFs, structured data)
 - Embeddings and semantic search (RAG architecture)
 - AI-driven workflows for classification and content generation
- Work with AI-assisted development tools (ChatGPT, Copilot) to accelerate development and improve code quality.
- Collaborate in a distributed team using Git, Docker, and agile practices.
- Designed and implemented RAG-based workflows integrating embeddings and semantic search for intelligent data retrieval
- Designed asynchronous workflows using queues and event-driven patterns to improve scalability and decouple services
- Designed and optimized relational databases (MySQL, PostgreSQL) with flexible data modeling using JSON fields.

Technologies: Next.js, React, TypeScript, NestJS, Node.js, MySQL, PostgreSQL, Docker, LangChain, OpenAI APIs, Embeddings, RAG Architecture, Git

Curotec, USA — Full-stack Developer

OCTOBER 2023 - AUG 2024

- Taking the Figma design and converting it to usable blade templates.
- Building frontend for the SelectLeaders WebSite.
- Making the Volt templates for the SelectLeaders WebSite.
- Making some queries to get data in a volt component.
- Making testing features in PHPUnit.
- Building components with Livewire and Tailwind CSS.
- Deploying and optimizing applications on AWS, leveraging S3 for storage, ECR for container registry, and App Runner for scalable deployments, ensuring seamless CI/CD workflows with Docker.
- Developed and optimized dynamic web applications using Next.js and TypeScript, leveraging API Routes for backend logic, server-side rendering (SSR) and static site generation (SSG) to enhance performance, and Tailwind CSS for modern UI design.
- Contributed to backend integration and API design for dynamic data-driven components.
- Improved performance and user experience through optimized frontend rendering strategies.

Technologies: Laravel, Livewire, Blade, Next.js, TypeScript, Docker, MySQL, OpenSearch, AWS (S3, ECR, App Runner)

CaboSaferide, FullStack Freelance —*San José del Cabo, México. August 2023 - October 2023*

- Led the design, development, and maintenance of a multi-tenant platform using **Laravel and React**, supporting multiple companies with isolated clients, configurations, and business workflows within the same system.
- Developed a REST API in **Laravel** with JWT authentication for external companies, integrating it with a React-based frontend using Redux for state management, React Router for navigation, and Material UI for reusable interface components.
- Designed and developed an appointment and trip management application for **cabosaferide.com**, allowing users to schedule and manage trips, assign drivers, and generate operational reports with KPIs covering expected customer volume by day, month, and year.
- Implemented a service-oriented architecture with **separate backend services**, using Laravel for the core multi-tenant platform and **Node.js** for independent services supporting administrative and client-specific workflows.
- Developed **React-based interfaces** for both the multi-tenant platform and the separate administrative service, ensuring consistent API integration and reusable frontend components across applications.
- Initially deployed the platform using **Laravel Vapor** and serverless infrastructure, later migrating workloads to **Vultr** to improve infrastructure control and optimize operational costs.
- Reduced the time required to assign trip quotas to drivers by approximately **90%** by automating scheduling and allocation workflows.
- Implemented real-time updates for driver assignments and schedule changes, allowing drivers and administrators to stay informed of last-minute operational changes.
- Designed asynchronous workflows using **queues, events, and background jobs** to decouple processes and improve application scalability and reliability.
- Designed and maintained a scalable multi-tenant architecture, ensuring proper data isolation, configurable business rules, and maintainability as new companies were onboarded.
- Developed and optimized web applications using **Next.js and TypeScript**, leveraging API routes, SSR/SSG where appropriate, and Tailwind CSS for responsive user interfaces.
- Built reusable and maintainable software components across **Laravel, Node.js, React, and Next.js**, following modular architecture and separation-of-concerns principles.

Technologies: Laravel · Node.js · React · Next.js · TypeScript · Laravel Vapor · PHP · REST APIs · Redux · React Router · Material UI · Vue.js · Vuex · Filament · Tailwind CSS · Tenancy for Laravel · Docker · Linux/Ubuntu Server · AWS · Vultr

Gestimedical, FullStack Developer Freelance —*Bogotá, Colombia. November 2019 - October 2023*

- Led the end-to-end development of the application, from requirements gathering and database design to backend and frontend development, deployment, and ongoing maintenance as the primary developer.
- Designed and developed a cloud-based application on **Google Cloud Platform (GCP)**, helping reduce annual on-premise infrastructure costs by approximately 50%.
- Developed an automated invoicing platform that replaced manual Excel-based processes, reducing invoice generation errors by approximately 50% and improving response times to client requests.
- Built and maintained the frontend using **React and TypeScript**, developing reusable components and integrating REST APIs to provide a reliable and maintainable user experience.
- Developed backend services using **Node.js and Laravel**, implementing RESTful APIs, business logic, data validation, and integrations with the frontend.
- Designed and maintained a scalable application architecture, with a focus on code reusability, maintainability, performance, and long-term reliability.
- Worked with **MySQL** to design and optimize database structures, queries, and relationships supporting the application's core business processes.
- Managed application deployment and server environments on **GCP and Linux**, including configuration, troubleshooting, and ongoing system maintenance.

Technologies: Google Cloud Platform (GCP) · Node.js · React · TypeScript · Laravel · PHP · REST APIs · MySQL · Tailwind CSS · Git · Linux

NIVELICS, Backend Developer — Bogotá, Colombia. June 2020 - July 2020

- Created endpoints and tested them to send to the Frontend team.
- Reduced 100% of errors in the integration by helping with the testing process.

Technologies: Symphony · Laravel · REST APIs · MySQL, Scrum

LUPATECH, FULL STACK Developer — Bogotá, Colombia. September 2019 - March 2020

- Created endpoints in NodeJS.
- Created all Frontend in Angular 7.
- Reduced 100% of errors in the testing implementation.

Technologies: MEAN. " MongoDB, Express, Angular 2X, NodeJS, Jira, AWS, Scrum"

PETROALIANZA, Team Lead — Tia Juana, Venezuela. April 2016 - August 2019

- Creation of the different modules for the ERP.
- Creation of the whole database structure
- Planning of the activities for the development team and follow-up.
- Administration of the repositories and servers where the application was deployed.

Technologies: PHP, CAKEPHP, CSS, BOOTSTRAP, LINUX, MYSQL, SCRUM, ANGULARJS, JQUERY

HOSPITAL EL ROSARIO, Full Stack Developer — Cabimas, Venezuela. April 2006 - March 2016

- For this worked with POO in PHP, MySQL, JavaScript, CAKEPHP and the servers were used locally.
- I made the website in WordPress using custom templates and some plugins that I had to develop to make links with the different endpoints that we had to book medical appointments.
- Creation of the different modules for the ERP developed in PHP and MySQL and using PSQL.
- Creation of the database structure in the modules involved.

Technologies: PHP, MYSQL, BOOTSTRAP, PSQL, JQUERY, JAVASCRIPT, CAKEPHP, WORDPRESS.

TECHNICAL SKILLS

- Frontend: React, Next.js, Vue.js, Angular, TypeScript
- Backend: Node.js, Nest.js, Laravel (PHP), Python
- Databases: MySQL, PostgreSQL, MongoDB, Redis
- Cloud & DevOps: Azure, AWS, GCP, Docker, CI/CD (GitHub Actions)
- Architecture: Microservices, REST APIs, Distributed Systems, Event-driven systems
- Tools: Git, Jira, Postman.

EDUCATION

- **Instituto de tecnología READIC UNIR** - Bogotá, Colombia. *TSU en Informatic*, 2003-2006.

LANGUAGES

- ENGLISH B2 UPPER-INTERMEDIATE
- SPANISH NATIVE
